DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of group I (claims 1-5) in the reply filed on 01/05/2007 is acknowledged.

Claim Objections

- 2. Claim 4 is objected to because of the following informalities: Claim 4 depend on claim 4. Appropriate correction is required.
- 3. Claim 5 is objected to because of the following informalities: Claim 5 depend on claim 5. Appropriate correction is required.

Claim Rejections - 35 USC § 112

- 4. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 5. Claims 2-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 6. Claim 2 recites the limitation "drain electrode" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 10/771,278

Art Unit: 2826

8. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Kim (US 6,087,678).

- 9. Regarding claim 1, Kim (e.g. figs. 6-8) shows a thin film transistor array panel comprising: a gate line 30 formed on an insulating substrate (e.g. glass); a gate insulating layer 34 on the gate line; a semiconductor layer 38 on the gate insulating layer; a data line 41a/41b formed on the gate insulating layer and including a portion disposed on the semiconductor layer 36; a passivation layer 42 formed on the data line and having a first contact hole exposing at least a portion of a boundary of the gate line or the data line; and a contact assistant 44b/c formed on the passivation layer and on the exposed portion of the boundary of the gate line or the data line.
- 10. Regarding claim 2, Kim teaches that the gate line may comprise a first layer of Cr or Mo and a second layer of aluminum alloy (col. 4/lls.63-656).
- 11. Regarding claim 3, Kim teaches that the contact assistant is in contact with a lower film.
- 12. Regarding claim 4 (assumed to depend on 1), Kim shows that the contact assistant comprises ITO (col. 5/lls. 43-44).
- 13. Regarding claim 5 (assumed to depend on 1), Kim shows a drain electrode 41b separated from the data lien and formed on the gate insulating layer and the semiconductor layer, and a pixel electrode 44a formed on the passivation layer and connected to the drain electrode through a second contact hole.
